

K&L ROSS LTD.

Corporate Branding

KLR offer both Heatsealing and Direct Embroidery on almost all of their products. Depending on the application where the product is to be used, we will advise accordingly. If you are unsure please ask one of our customer services staff who can explain in more detail.

Heat Applied Transfers

Probably the fastest and most efficient method of marking garments. Machine washable and extremely durable. Available as Non Flame Retardant or Flame Retardant. Lead time 1 - 3 days from point of order.

FR Transfers

Flame Retardant and suitable for industrial wash.

Endura Transfers

Industrial wash non flame retardant.

Trimax

Flame retardant and suitable for domestic wash.

Direct Embroidery

Embroidery direct onto the garment. The time constraints depend on the complexity of the logo being set up as an embroidery. The more colours and more detail it has the longer it takes to set up and apply to garments. There is a one off set up charge, again depending on the complexity and size of the logo. Machine washable and extremely durable. Non Flame Retardant. Lead time usually 3 – 5 days from point of order.

Direct Badging

Embroidery onto badges which are then sewn onto garments. There is a one off set up charge, again depending on the complexity and size of the logo. The more colours and more detail it has the longer it takes to set up and apply to garments. Machine washable and extremely durable. Non Flame Retardant. Lead time 3 – 5 days from point of order.
